# Health and Lifestyle Survey 2012 Report 

A report of the 2012 survey of health and lifestyle behaviours and attitudes of Seventh-day Adventists in Australian and New Zealand Adventist Churches, High Schools and Avondale College

## Executive Summary Adventist Health (South Pacific)

November 2013

```
Synopsis
This report presents highlights of the 2012 Health \& Lifestyle Survey conducted in Seventh-day Adventist High Schools and Churches in Australia and New Zealand and Avondale College. The questionnaire was very similar to the surveys conducted in 1989 and 2001. So where possible, comparative trends are presented for health behaviours and beliefs covering the 23 year period.
Note: Unless specified the report results are only of Adventist participants.

High School students and church member participants

## 3 Survey Description

- A cross-sectional quantitative survey to examine the prevalence of healthy and health-risk behaviours among a broad representation of Adventists in Australia and New Zealand.
- Participation was voluntary and the survey was completely anonymous.

Design

- Standard instruction and information protocols ensured consistency in survey administration.

Sample

- High school students in all 26 Adventist High Schools in Australia and New Zealand.
- Avondale College students on the Cooranbong and Wahroonga campuses .
- A random selection of 4,353 Adventist church members in Australia and New Zealand.

-The 20-page questionnaire included questions on health beliefs, eating, drinking, alcohol, tobacco and substance use, exercise, weight, childhood, lifestyle and religious activities.
- Adults had two extra pages related to health care matters.

Questions
-The non-identified, self-administered paper questionnaire took 20-45 minutes to complete. - Adult participants also had the option to complete the survey anonymously online.
-All levels of church and school administration in Australia and New Zealand supported the study; Avondale College Human Research Ethics Committee gave ethics approval.

- High School Principals organized informed consent and the administration of the survey in class settings.
- Avondale College students were invited to complete the survey via the paper version or online.
-The SPD IT Department randomly selected the church sample from the online membership database and Conference s mailed the survey packs to their selected members.
- All survey forms were returned to the Adventist Health (SPD) office, checked and then electronically scanned by Educational Assessment Australia. Analysis was conducted using SPSS software.

## 4 Participants

## Key Points

- Of the 4,353 surveys mailed to church members, 1,160 were returned, an overall response rate of 27\% (Table 4.1). Response rates from church members in previous surveys were much higher 1989 (68\%) and 2001 (60\%) and there were more respondents in the younger age groups (Table 4.2).
- 184 (96\%) of the 192 Avondale student responses were online compared to only $8 \%$ from church members.
- Six high schools elected not to participate. Ninety nine of the 2,162 returned school questionnaires were invalid (Table 4.3). Of the 2,063 valid student surveys, 837 ( $41 \%$ ) were from non-Adventist students.
- $57.6 \%$ of all respondents were female and of those aged $30+$ years $78 \%$ were married.
- Ethnic representation: 66.3\% Caucasian, 7.4\% Asian, 7.3\% Pacific Islander, 2.9\% Aboriginal/TI, 1.4\% Maori.

Table 4.1: Number of Respondents by Conference with \% rate of survey return, 2012

| Conference | Female | Male | Total | \% Return |
| :--- | ---: | ---: | ---: | ---: |
| Greater Sydney | 61 | 30 | 91 | $20 \%$ |
| North NSW | 94 | 77 | 171 | $30 \%$ |
| Northern Aust. | 36 | 18 | 54 | $24 \%$ |
| South Australia | 60 | 47 | 107 | $35 \%$ |
| South NSW | 36 | 30 | 66 | $26 \%$ |

| Total | 1066 | 894 | 1960 |

## Key Points

- $90 \%$ of all Adventist respondents classified themselves in the categories of good to excellent health (Figures 5.1 and 5.2).
- Males tended to assess their health better than females.
- More than $25 \%$ of persons aged 30 years or more had only 6 hours or less of sleep per night (Figure 5.3).
- Two frequently used measures of health are Body Mass Index (using height and weight) and waist measurement. Figure 5.4 shows the proportion of participants who did not respond or did not know these measures when completing the questionnaire.
- Females of all age groups appear to experience more stress than males (Table 5.1) although there is an almost equal proportion of happy females and males (Table 5.2).

Figure 5.1: Self-assessed Health Status
\% Females by Age, 2012

Figure 5.3: Hours of Sleep per Night
\% Persons by Age, 2012

Table 5.1: Have you felt stressed?

| Female | 11-18 years | 20.4\% | 61.4\% | 16.1\% | 2.1\% |
|  | 19-29 years | 11.3\% | 71.7\% | 17.0\% | 0.0\% |
|  | $30+$ years | 12.5\% | 73.8\% | 13.3\% | 0.3\% |
| Male | 11-18 years | 19.3\% | 66.8\% | 12.8\% | 1.0\% |
|  | 19-29 years | 12.5\% | 75.0\% | 10.4\% | 2.1\% |
|  | $30+$ years | 14.4\% | 71.1\% | 14.3\% | 0.3\% |

## 6 Physical Activity

## Key Points

- Only 50\% of participants have a regular exercise program (Figure 6.1).
- Males of all ages are more active than females.
- More high school students (15-18 years) than other groups sit seven or more hours a day on both week days and weekend days (Figure 6.2).

Figure 6.1: Regular Exercise Program
\% Persons by Gender and Age, 2012

Figure 6.2: Hours Spent Sitting
\% Persons by Age, 2012

Table 6.1: Times of Moderate or Vigorous Exercise in a Week \% Persons by Gender and Age, 2012

| Gender <br> and Age | None | Once | Twice | 3 times | 4+ times |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Female |  |  |  |  |  |
| 11-18 years | $7.8 \%$ | $13.1 \%$ | $21.1 \%$ | $21.3 \%$ | $36.7 \%$ |
| $19-29$ years | $6.7 \%$ | $10.5 \%$ | $14.3 \%$ | $21.0 \%$ | $47.6 \%$ |
| $30+$ years | $16.7 \%$ | $11.9 \%$ | $13.5 \%$ | $16.4 \%$ | $41.5 \%$ |
| Male |  |  |  |  |  |
| $11-18$ years | $4.6 \%$ | $8.5 \%$ | $11.7 \%$ | $21.0 \%$ | $54.2 \%$ |
| $19-29$ years | $4.3 \%$ | $19.1 \%$ | $4.3 \%$ | $19.1 \%$ | $53.2 \%$ |
| $30+$ years | $19.7 \%$ | $11.0 \%$ | $15.1 \%$ | $13.6 \%$ | $40.6 \%$ |

| 11-18 years | 1.3\% | 4.9\% | 28.9\% | 43.0\% | 21.9\% |
| 19-29 years | 4.3\% | 2.1\% | 23.4\% | 51.0\% | 19.1\% |
| 30+ years | 15.1\% | 6.4\% | 31.9\% | 32.7\% | 13.8\% |

Table 6.2: Times Active in Team Sports \% Persons by Gender and Age, 2012

| Gender <br> and Age | Never | $1+$ <br> times/month |  |
| :--- | ---: | ---: | :---: |
| Female |  |  |  |
| $11-18$ years | $18.3 \%$ | $54.4 \%$ |  |
| $19-29$ years | $26.7 \%$ | $40.0 \%$ |  |
| $30+$ years | $84.1 \%$ | $6.1 \%$ |  |
| Male |  |  |  |
| $11-18$ years | $18.3 \%$ | $61.5 \%$ |  |
| $19-29$ years | $21.3 \%$ | $46.8 \%$ |  |
| $30+$ years | $70.9 \%$ | $11.6 \%$ |  |

## Key Points

- Body Mass Index (BMI) is calculated by (Weight in $\mathrm{kg} /$ Height in $\mathrm{m}^{2}$ ). Normal range is 18.5-24.9, overweight range 25-29.9 and obese range 30+.
- Of the adults 30+ years, who reported self-assessed height and weight, $25.6 \%$ of females and $41.4 \%$ of males were overweight and $28.6 \%$ females and $20.9 \%$ males were obese (Figures 7.1 and 7.2 ).
- The proportion of overweight and obese females and males has increased significantly from 2001 to 2012 (Figures 7.3 and 7.4). Data was not available from the 1989 survey.
- Waist measures show that more of the older females are at high risk compared to males (Tables 7.1 and 7.2).

Figure 7.1: Body Mass Index, \% Females by Age, 2012

| $19-29$ years | $87.5 \%$ | $9.4 \%$ | $3.1 \%$ |
| $30+$ years | $50.0 \%$ | $28.9 \%$ | $21.1 \%$ |

## Key Points

- In the three surveys conducted in 1989, 2001 and 2012 participants were asked to rate their belief of the harm of various substances in one of four categories (Very harmful, Somewhat harmful, Not very harmful and Not harmful).
- A higher percentage of all age groups rated increasing levels of alcohol as very harmful, but the younger age groups were lower than the 30+ years group (Figure 8.1).
- A similar pattern was observed for caffeine drinks. But significantly more of each age group rated 4-5 cola drinks/day more harmful than 4-5 coffee drinks/day (Figure 8.2).
- The belief that marijuana is very harmful is higher among females and older age groups (Figure 8.3).
- The trend of belief of harm over the years has increased for tobacco, alcohol and marijuana, although note the dip for marijuana in 2001 (Figure 8.4).

Figure 8.1: Belief - Alcohol Drinks are Very Harmful \% Persons by Age, 2012

Figure 8.2: Belief - Caffeine Drinks are Very Harmful \% Persons by Age, 2012

Figure 8.3: Belief - Marijuana is Very Harmful \% Gender by Age, 2012

Figure 8.4: Trend of Belief - Tobacco, Marijuana and Alcohol are Very Harmful. \% Persons by Survey Year

## 9 <br> Medications

## Key Points

- Analgesic and sleeping tablet use in past month, past year and lifetime was asked in each survey.
- Lifetime and past month use of sleeping tablets and anti-depressants is low (Figures 9.1 and 9.2).
- Lifetime analgesic use is similar to the general population use but the past month use is lower (e.g.11-18 year-old Adventists 51.6\% compared to Australian secondary school students 69.1\% (see page 21)).
- Among the other reasons given for analgesic use (Table 9.1) is menstrual pain by females.
- Males have a much lower use of analgesics than females (Figures 9.3 and 9.4) but there is a decreasing trend of use for the younger age groups.

Figure 9.1: Medications Ever Used in Lifetime \% Persons by Age, 2012

Figure 9.1: Medications Used in Past Month \% Persons by Age, 2012

Table 9.1: Reason for Use of Analgesics, \% Persons by Gender and Age, 2012

| Gender | Age | Headache | Cold or Flu | Dental | Injury | Other | No reason |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Female | 11-18 years | 44.9\% | 20.5\% | 7.1\% | 4.3\% | 21.5\% | 1.8\% |
|  | 19-29 years | 51.5\% | 13.9\% | 1.0\% | 3.0\% | 30.7\% | 0.0\% |
|  | 30+ years | 39.2\% | 11.3\% | 5.3\% | 4.9\% | 38.8\% | 0.6\% |
| Male | 11-18 years | 48.6\% | 24.3\% | 4.5\% | 13.2\% | 8.6\% | 0.7\% |
|  | 19-29 years | 46.5\% | 20.9\% | 7.0\% | 2.3\% | 20.9\% | 2.3\% |
|  | 30+ years | 31.8\% | 17.9\% | 8.3\% | 8.3\% | 32.7\% | 0.9\% |

Figure 9.3: Trend of Analgesic Use in Past Month
\% Females by Age and Survey Year

Figure 9.4: Trend of Analgesic Use in Past Month \% Males by Age and Survey Year

## 10 <br> Tobacco

## Key Points

- Smoking rates are very low among Adventists. Table 10.1 shows the numbers and percentages for each category of self-assessed smoking status.
- The Figures 10.1 shows that among the younger age groups non-smoking has increased significantly since 2001. Those "ever trying" a cigarette have correspondingly decreased (Figure 10.2).
- Likewise Figure 10.3 shows a marked decrease in those smoking three or more cigarettes in the past month.
- The 30+ year old group shows a different trend and is likely influenced in part by the fact that many of this group lived in a more permissive smoking society and became church members as adults.

Table 10.1: Smoking Status - Self-assessed, \% Persons by Age, 2012

| Age | Heavy smoker | Light smoker | Occasion smoker | Ex-smoker | Non-smoker |
| :--- | ---: | ---: | ---: | ---: | ---: |
| $11-18$ years | 2 | 7 | 23 | 22 | 985 |
|  | $0.2 \%$ | $0.7 \%$ | $2.2 \%$ | $2.1 \%$ | $94.8 \%$ |
| $19-29$ years | 0 | 2 | 1 | 7 | 144 |
|  | $0.0 \%$ | $1.3 \%$ | $0.6 \%$ | $4.5 \%$ | $93.5 \%$ |
| $30+$ years | 2 | 3 | 5 | 84 | 904 |
|  | $0.2 \%$ | $0.3 \%$ | $0.5 \%$ | $8.4 \%$ | $90.6 \%$ |

| Other family member | $7 \%$ |
| Non-family adult | $5 \%$ |
| Parent | $4 \%$ |
| Spouse | $2 \%$ |
| Advertising | $2 \%$ |

## 11

Alcohol

## Key Points

- Particularly for the younger age groups the trends of never trying and ever trying alcohol are positive (Figures 11.1 and 11.2).
- The trend for using alcohol in the past year has moved higher for females 19-29 and 30+ years compared to males (Figures 11.3 and 11.4).
- Friends and peer groups as well as personal choice most influence the uptake of drinking (Table 11.1).
- The most popular choice of beverage appears to be spirits, followed by wine and beer (Table 11.2).

Figure 11.1: Trend of Never Used Alcohol \% Persons by Age and Survey Year

## 12 Marijuana

## Key Points

- Rates of current and recent marijuana use are very low (Tables 12.1 and 12.2 and Figure 12.1). The number of persons using marijuana 10 or more times is also shown in Table 12.2.
- A higher \% of males of all age groups tend to use marijuana compared to females.
- The trend of marijuana use has significantly decreased for the younger age groups since 2001 following a rise after 1989 for both females and males (Figures 12.2 and 12.3).

Table 12.1: Marijuana Use in Time Periods, \% Persons by Age, 2012

| Age | Past Week | Past Month | Past Year |

| $50-69$ years | 2 | 0.5 |
| $70+$ years | 0 | 0.0 |

Figure 12.3: Trend of Ever Used Marijuana \% Males by Age and Survey Year

## 13 Other Substances

## Key Points

- Use of most substances is very low but in comparison inhalant use is much higher for 11-18 year olds (Table 13.1 and Figure 13.1). This is possibly an artefact but needs to be investigated further.
- The inhalant question in the 1989 and 2001 surveys was more general but the 2012 question was: "How many times, if ever, have you deliberately sniffed (inhaled) from spray cans or deliberately sniffed things like glue, paint, petrol or thinners in order to get high or for the way it makes you feel?"
- The Secondary Schools Survey 2011 (see page 21) had the same question but with a qualifier: "This does not include sniffing white-out, liquid paper, textas, markers or pens." They added this in their 1999 survey, prior to which the rates for sniffing were higher.
- Among 11-18 year olds inhalant use appears to be experimental or incidental (Table 13.2) but the trend for this group has significantly increased over time (Figure 13.2).

Table 13.1: Substances Ever Used in Past Month, \% Persons Using by Age, 2012

| Age | Inhalants | Steroids | Amphetamines | Marijuana | Cocaine | Heroin | Hallucinogens |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: |

| Lifetime | $76.2 \%$ | $6.9 \%$ | $3.5 \%$ | $13.3 \%$ |

## 14 Eating and Foods

## Key Points

- Several key questions explored dietary practises and food frequency. One question asked "How would you describe your USUAL diet? (i.e. what you eat at least weekly or more often)." In 2012 participants marked one of four responses (Total vegetarian (Vegan), Lacto-ovo vegetarian, Pesco-vegetarian (includes fish but no red meat) and Non-vegetarian). (Figure 14.1 shows that almost $70 \%$ of $11-18$ year olds classified themselves as non-vegetarian.
- In 1989 and 2001 this diet question had just 3 categories (pesco-vegetarian was not included). Hence, two diet models present vegetarian dietary trends over 23 years. Model 1 (Figure 14.3) combines all three vegetarian groups (vegan, lacto-ovo and pesco-veg). Since 2001 this model shows an increase in vegetarian eating to $57 \%$ for both older age groups whereas the younger age group drops to $31 \%$.
- Figure 14.4 (Model 2) excludes the pesco-vegetarians from the vegetarian group and adds them to the non-vegetarian group, thus the trend is downward for all age groups.
- In Tables 14.1 and 14.2 the trend for vegan diet only is shown. Over the years there is an increasing trend toward a vegan diet for the older age groups and particularly for males.

| $30+$ years | $3.0 \%$ | $4.8 \%$ |

## 15

## Key Points

- Trend for proportion of persons eating fast food is increasing among younger age groups (Figure 15.1).
- Trend for consumption of fruit has increased, vegetables dropped slightly for the youth and breads/cereals decreased by 20\% for all groups (Figure 15.2).
- Trend for the eating of beef, chicken and fish is increasing among all age groups (Figure 15.3).

Figure 15.1: Trend of Eating Fast Food \% Persons by Age and Survey Year

Table 15.1: Eating of Various Foods - \% Persons by Age, 2012

| Food (Frequency) | 11-18 years | 19-29 years | 30+ years |
| :--- | :---: | ---: | ---: |
| Vegetables (<1 serve/day) | $18 \%$ | $15 \%$ | $11 \%$ |
| Fruit (<1 serve/day) | $20 \%$ | $33 \%$ | $21 \%$ |
| Cereals (<1 serve/day) | $17 \%$ | $16 \%$ | $17 \%$ |
| Nuts (Never or rarely) | $20 \%$ | $6 \%$ | $5 \%$ |
| Beans (Never or rarely) | $21 \%$ | $9 \%$ | $6 \%$ |
| Red meat ( $\geq 1$ time/week) | $50 \%$ | $26 \%$ | $30 \%$ |
| Fish ( $\geq 1$ time/week) | $39 \%$ | $24 \%$ | $37 \%$ |
| Chicken ( $\geq 1$ time/week) | $56 \%$ | $33 \%$ | $36 \%$ |
| Pork ( $\geq 1$ time/week) | $19 \%$ | $2 \%$ | $3 \%$ |
| Salt (1+ times/day) | $14 \%$ | $12 \%$ | $20 \%$ |

Figure 15.2: Trend of Eating Fruit, Vegetables and Breads/Cereals, \% Persons by Age and Survey Year
Fruit $-2+/$ day

Figure 15.3: Trend of Eating Beef, Chicken and Fish, Persons by Age and Survey Year

## Key Points

- Almost 60\% of respondents report drinking less than six glasses of water per day, 21.5\% of 11-18 year olds report drinking one or less per day (Table 16.1).
- $27.5 \%$ of teenagers drink one or more glasses of fruit juice per day (Table 16.2).
- Consumption of soy milks is from $24 \%$ to $44 \%$ across the age groups.
- The trend of caffeine beverages (one or more drinks per day of tea, coffee and cola) appears to be downward across all beverages and age groups; cola drinks significantly so for teenagers (Figure 16.2).

Table 16.1: Drinks of Water per Day \% Persons by Age, 2012

| Frequency | 11-18 years | 19-29 years | 30+ years |
| :--- | ---: | ---: | ---: |
| క1 time/day | $21.5 \%$ | $8.7 \%$ | $6.9 \%$ |
| 2-3 times/day | $20.9 \%$ | $18.8 \%$ | $18.2 \%$ |
| 4 -5 times/day | $25.0 \%$ | $28.9 \%$ | $33.4 \%$ |
| 6+ times/day | $32.6 \%$ | $43.6 \%$ | $41.4 \%$ |

| Soy regular | $19.1 \%$ | $27.5 \%$ | $34.7 \%$ |
| Soy lite | $3.8 \%$ | $9.8 \%$ | $9.3 \%$ |
| Evaporated | $0.3 \%$ | $0.7 \%$ | $0.0 \%$ |
| Other (rice, oat) | $3.5 \%$ | $6.5 \%$ | $6.2 \%$ |
| Do not drink milk | $6.8 \%$ | $5.9 \%$ | $4.6 \%$ |

Figure 16.2: Trend of Caffeine Drinks 1+/day, \% Persons by Age 2001 and 2012

## 17 <br> Lifestyle Activities

## Key Points

- Most members have their own mobile phones and very high proportions of the younger age groups have their own social network account such as Facebook or Twitter (Figures 17.1 and 17.2).
- More of the 30+ year olds watch TV for more hours than the younger age groups (Figure 17.3).
- About $30 \%$ of the 11-18 year olds attend movies $1+$ times/month but this is less than 2001 (Figure 17.5).

Figure 17.4: Hours Play Computer Games \% Persons by Age, 2012

Figure 17.6: Times Volunteer in Community/Church \% Persons by Age, 2012

## 18 Faith and Religion

## Key Points

- Respondents were classified as Seventh-day Adventist if they had been baptised and for an unbaptised young person who was living with a Seventh-day Adventist parent.
- The majority of baptised respondents were baptised before the age of 15 years although $15 \%$ of respondents were baptised after 29 years of age (Table 18.1).
- Frequency of church attendance has decreased over time except for the 19-29 year olds (Figure 18.2).
- Trends for faith experiences are positive (Figures 18.4 and 18.5).

Figure 18.1: Times Attend Church \% Persons by Age, 2012

Table 18.1: Age when Baptised \% Persons, 2012 Survey

| Age of Baptism | $\%$ |
| :--- | :--- |
| $<=14$ years | 43.8 |
| $15-18$ years | 25.4 |
| $19-29$ years | 15.8 |
| $30+$ years | 15.0 |

Figure 18.3: Trend of Weekly Family Worship \% Persons by Age and Survey Year

Figure 18.5: Trend of Satisfying to be Christian \% Persons by Age and Survey Year

## 19 Home and Family

## Key Points

- High proportions of Adventists grew up, and now live, in a rural environment (Figures 19.1 and 19.2).
- Nearly $40 \%$ of older members grew up in a non-Adventist home (Figure 19.1).
- $27 \%$ of older members compared to $10 \%$ of younger members describe their own childhood family as strict and very rigid Figure 19.4)
- A number of childhood conditions experienced are of concern (parents drinking, parents separating/divorce, violence and abuse) (Table 19.1)

Figure 19.1: Place Where Lived as a Child \% Persons by Age, 2012

Figure 19.2: Place Where Now Live \% Persons by Age, 2012

Figure 19.4: Family Description in Childhood \% Persons by Age, 2012

Table 19.1: Childhood Conditions Experienced, \% Persons by Age, 2012

| Condition | 11-18 years | 19-29 years | 30+ years |
| :--- | ---: | ---: | ---: |
| Parents smoked tobacco | $16.7 \%$ | $11.2 \%$ | $32.2 \%$ |
| Parents drank alcohol | $24.5 \%$ | $16.4 \%$ | $26.2 \%$ |
| Parents in trouble with law | $9.8 \%$ | $5.9 \%$ | $1.8 \%$ |
| Parents separated/divorced | $22.7 \%$ | $18.4 \%$ | $11.8 \%$ |
| Parent died | $4.1 \%$ | $4.6 \%$ | $16.3 \%$ |
| Parent absent from home | $19.4 \%$ | $17.8 \%$ | $16.3 \%$ |
| Family violence occurred | $18.7 \%$ | $12.5 \%$ | $18.7 \%$ |
| I was physically abused | $13.2 \%$ | $5.9 \%$ | $14.1 \%$ |
| I was sexually abused | $3.0 \%$ | $5.3 \%$ | $7.5 \%$ |
| I felt like misfit | $16.0 \%$ | $23.2 \%$ | $21.0 \%$ |
| Compulsive behaviour | $9.0 \%$ | $15.1 \%$ | $6.0 \%$ |

## 20 Attitudes and Beliefs

## Key Points

- In each survey $(1989,2001,2012)$ there were belief statements to which participants indicated their level of agreement (Strongly disagree, Disagree, Undecided, Agree, Strongly agree).
- For statements of faith and religious practice a higher proportion of older Adventists compared to younger Adventists were in agreement (Table 20.1).
- All groups had high expectations for the church to help members with drug problems.
- There is a decreasing trend in all groups that "the Bible forbids clearly forbids all use of alcoholic beverages" (Figure 20.1).
- Less young Adventists believe they will remain a church member for the rest of their lives (Figure 20.2)

Table 20.1: Agree or Strongly Agree with Statement, \% Persons by Age Group, 2012

| Statement | 11-18 years | 19-29 years | 30+ years |
| :--- | ---: | ---: | ---: |
| Very satisfying to be a Christian | $73.0 \%$ | $88.2 \%$ | $94.5 \%$ |
| Likely to remain a church member for rest of my life | $66.1 \%$ | $86.8 \%$ | $92.6 \%$ |
| My religion/spirituality is very important in my life | $74.2 \%$ | $89.4 \%$ | $96.2 \%$ |
| My life is filled with meaning and purpose | $66.4 \%$ | $85.4 \%$ | $88.1 \%$ |
| I enjoy going to church | $69.6 \%$ | $86.2 \%$ | $89.0 \%$ |
| Parents showed me love | $84.6 \%$ | $92.1 \%$ | $85.0 \%$ |
| Parents understood me | $69.7 \%$ | $74.8 \%$ | $65.2 \%$ |
| Family had lots of fun | $76.2 \%$ | $86.8 \%$ | $68.5 \%$ |
| Parents didn't trust me | $16.4 \%$ | $14.5 \%$ | $8.7 \%$ |
| Parents didn't like what I did | $4.9 \%$ | $4.6 \%$ | $5.4 \%$ |
| Enjoyed being at home with family | $72.9 \%$ | $83.6 \%$ | $82.1 \%$ |
| Father was very strict with me | $33.6 \%$ | $45.0 \%$ | $54.1 \%$ |
| Bible forbids all alcohol | $45.0 \%$ | $35.9 \%$ | $64.6 \%$ |
| Bible forbids excess alcohol (drunkenness) | $70.4 \%$ | $86.9 \%$ | $92.6 \%$ |
| Preferable to eat a vegetarian diet | $42.0 \%$ | $66.7 \%$ | $83.4 \%$ |
| Church should help members with drug problems | $77.6 \%$ | $96.1 \%$ | $94.0 \%$ |
| I am concerned youth are drinking | $22.0 \%$ | $55.9 \%$ | $46.2 \%$ |
| Alcohol in moderation prevents heart disease | $19.3 \%$ | $9.2 \%$ | $9.8 \%$ |
| Church is doing enough to combat drugs | $19.4 \%$ | $10.5 \%$ | $18.3 \%$ |
| Church is doing enough to combat alcohol problems | $21.2 \%$ | $11.3 \%$ | $20.7 \%$ |
| Church should actively promote care of the environment | $57.6 \%$ | $73.2 \%$ | $77.3 \%$ |

Figure 20.1: Trend of Belief - Bible Forbids all Alcohol \% Persons by Age and Survey Year

Figure 20.2: Trend of Belief - Likely I will remain SDA \% Persons by Age and Survey Year

## Key Points

- Table 21.1 shows the number of SDA and non-SDA participants in each school taking part in the survey.
- A large survey of Australian secondary school students was conducted by the Cancer Council Victoria in 2011 (Australian secondary school students' use of tobacco, alcohol, and over-the-counter and illicit substances in 2011).
- Tables 21.2, 21.3 and 21.4 compare the Australian student rates to Adventist schools for smoking, alcohol use and other substance use. Tables 21.2 and 21.5 show rates separately for SDA students only and all students at Adventist schools.
- Except for inhalants, all substance use is much lower in Adventist schools compared to Australian schools.

Table 21.1: SDA Status of Students by High School
\% Students, 2012

| School | Unknown | SDA | Non-SDA | Total \# |
| :---: | :---: | :---: | :---: | :---: |

## Key Points

- Questions on health care and medical conditions were answered only by adults aged 19 years and older.
- $54 \%$ of adults $65+$ years had a flu injection in the past year and they also had the lowest flu rate $-15 \%$ (Table 22.1).
- Those 50 years and older had significantly higher rates of hypertension, high cholesterol, arthritis, back problems and cancer compared to younger adults (Table 22.2).
- The highest diagnosed medical condition among the 19-39 year olds was depression-15\% (Table 22.2).
- More than $80 \%$ of respondents had made at least one visit to a general practitioner in the past year and visits to a chiropractor were slightly more than visits to a physiotherapist (Table22.3).
- More than $30 \%$ of respondents used a multi-vitamin supplement at least once a month and older adults had higher usage of fish oil supplement and herbal remedies than the vounger adults (Table 22.4).

## Key Points

- In this research significant associations were found between various factors (conditions, beliefs and behaviours) and risky health behaviours and conversely healthy behaviours.
- However, since this is a cross-sectional study, these relationships cannot be determined as cause and effect and need to be interpreted cautiously.
- The tables below illustrate the magnitude of some of these associations and correlations with other risk behaviours. The associations are not adjusted for age or other factors.

## Factors associated with Smoking

- Smokers compared to non-smokers are more likely to have negative factors from childhood; believe cigarettes are not very harmful; drink alcohol and have used marijuana.
- Smokers tend to believe their religion is less important and attend church less often.

Table 23.1: Factors Associated with Smoking, \% by Smokers Status, 2012

## Factors associated with Alcohol Use

- Alcohol drinking is significantly associated with other lifestyle behaviours such as drinking caffeine beverages, smoking, marijuana use and a non-vegetarian diet.
-Drinkers have less agreement with "the Bible forbids all alcohol" and that "alcohol is harmful".
Table 23.1: Factors Associated with Drinking Alcohol, \% by Alcohol Status, 2012

| Alcohol Status | Drink Caffeine 1+/week |  | Vegetarian Diet |  | Family worship |  | Bible forbids all alcohol |  | I'll Drink in future |  | Alcohol is Harmful |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Non-drinker | 51\% |  | 7\% | $\square$ | $\frac{32 \%}{\mid 12 \%}$ |  | $\begin{array}{\|c\|} \hline 49 \% \\ \hline 18 \% \\ \hline \end{array}$ | $\square$ | $\frac{12 \%}{69 \%}$ |  | $\begin{array}{\|l\|} \hline 52 \% \\ \hline 12 \% \\ \hline \end{array}$ |  |
| Drinker | 87\% |  |  |  |  |  |  |  |  |  |  |  |

## Factors associated with Diet

-Respondents eating vegan and vegetarian diets compared to a non-vegetarian diet show a lower prevalence of the diagnosed conditions of diabetes, obesity, high BP and high cholesterol.

- But Vitamin $B^{12}$ deficiency is higher among the vegetarian groups.

Table 23.3: Health Conditions Associated with Diet, \% Prevalence of Condition by Type of Diet, 2012

| Type of Diet | Diabetes |  | Low <br> Vitamin $\mathbf{B}^{12}$ |  | Overweight \& Obese |  | High BP | High Cholesterol |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Vegan | 3\% |  | 17\% |  | 31\% | $1-\frac{\frac{17 \%}{21 \%}}{25 \%}$ |  | 10\% | 111 |
| Lacto-ovo | 6\% |  | 16\% |  | 49\% |  |  | 20\% |  |
| Non-Veg + Pesco | 9\% |  | 10\% |  | 56\% |  |  | 22\% |  |

## 24 At a Glance - Snapshot Highlights

## Diet

Increased trend for vegan diet particularly for older age groups
X More than $40 \%$ of younger ages eat fast food 2+ times/week
X More eating beef, chicken and fish

## Alcohol

Trend of "ever used" alcohol has decreased since 2001
X 40\% of females and $30 \%$ males aged 19-29 years used alcohol in past year

## Drugs

Prevalence of illicit drugs is very low
$\sqrt{ }$ Use of marijuana has decreased since 2001
$X$ Inhalant use among 11-18 year olds has increased since 2001

## Faith

- $15 \%$ members baptised after 29 years of age
$\sqrt{ }$ Positive trend of members enjoying church and finding the Christian life satisfying
19-29 year-olds have a $20 \%$ increase trend of regular church attendance since 1989

## Physical Activity

X Only $50 \%$ of respondents have a regular exercise program

- Males of all ages are more active than females
X Students sit more hours than adults

## Body Mass Index

BMI among younger ages has decreased slightly since 2001
X Among 30+ years, $54 \%$ females and $62 \%$ males are overweight or obese

## Tobacco

Smoking rates are very low
$\sqrt{ }$ Among young people non-smoking has increased significantly since 2001
$95 \%$ of 11-18 year olds report as having never smoked

## Lifestyle

More than $80 \%$ have their own mobile phone and $80 \%$ of younger ages have their own social network account
$50 \%$ of older members regularly volunteer for the Church or community

## Beliefs

- $90 \%$ of older members expected church to help members with drug problems
- $66 \%$ of 11-18 year olds believe they would remain a church member for life

Lower trend for "Bible forbids all alcohol"
